

This is what your finished javascript file should look like.  
Remember the capitilization, spacing, and punctuation marks matter

## Description

## Your Code

Put your bigDiv into a variable

Put your bigPic into a variable

Put all of your smallPic(s) into a variable

Listen for a click on lightbox (bigDiv)

Hide the lightbox (bigDiv)

End the event listener

Start a for loop (repeat for each picture)

Listen for click on each picture

Unhide the lightbox (bigDiv)

Change the bigPic to match the smallPic

End the function for when it's clicked

End the for loop

```
JS script.js x
JS script.js > ...
1 let lightbox = document.getElementById("bigDiv");
2 let bigPicBox = document.getElementById("bigPic");
3 let smallPics = document.getElementsByClassName("smallPic");
4
5 lightbox.addEventListener("click", function(){
6     lightbox.style.display = "none";
7 })
8
9 for(let items = 0; items < smallPics.length; items++){
10     smallPics[items].addEventListener("click", function(){
11         lightbox.style.display = "block";
12         bigPicBox.src = smallPics[items].src;
13     })
14 }
15
16
17
```

variables are the "treasure box"  
that hold things

The element from your html that  
we are holding in the variable

Put it here
